Authorization for this examiner's amendment was given examiner since the withdrawn independent claim 20 has not been amended to contain the allowed subject matter. Therefore the independent claim 20 is canceled.

#### **DETAILED ACTION**

Claims 1-3, 6-9, 11-13, 16-19 and 21-23 directed to an allowable product.

Pursuant to the procedures set forth in MPEP § 821.04(B), claims 4-5, 14-15, previously withdrawn from consideration as a result of a restriction requirement, hereby rejoined and fully examined for patentability under 37 CFR 1.104 since claims 4-5 and 14-15 depend on the allowed claims.

Claims 10 and 20 are cancelled.

#### ***Allowable Subject Matter***

Claims 1-9, 11-19 and 21-23 are allowed. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed since there is no prior teaches a display apparatus selectively operated in a first mode and a second mode, said display apparatus comprising:

- a unitary display panel having a viewer side and a back side, said viewer side divided into a first area and a second area, in response to an image signal, said first area and said second area configured to display variable data on said viewer side;
- a first light source for illuminating said first area from said back side; and
- a second light source for illuminating said second area from said back side;

wherein

- said first area and said second area are illuminated with substantially same brightness by said first light source and said second light source simultaneously to make said first area and said second area having substantially same visually brightness on the viewer side when said display apparatus is operated in said first mode;
- said second light source is driven to a lower brightness level to make said second area visually darker than said first area on the viewer side when said display apparatus is operated in said second mode for conserving power of said display apparatus.

Claims 2-9 are allowed since they depend on the allowed claim 1.

Claim 11 is allowed since there is no prior teaches display system comprising:  
an electronic device selectively operated in a first mode and a second mode;

- a unitary display panel having a viewer side and a back side, said viewer side divided into  
a first area and a second area, in response to an image signal, said first area and said second area configured to display variable data on said viewer side;
- a first light source for illuminating said first area from said back side;
- a second light source for illuminating said second area from said back side; and

- a processor for controlling said first light source and said second light source according to modes of said electronic device;

wherein said first light source and said second light source are driven to illuminate said first area and said second area simultaneously and to make said first area and said second area have substantially same visually brightness as each other when said electronic device is operated in said first mode, so that data for said first area and data for said second area are illuminated on said viewer side at the same time; wherein said second light source is driven to generate light with lower brightness than said first light source to make said second area visually darker than said first area on the viewer side when said electronic device is operated in said second mode for conserving power of said display system.

Claims 12- 19 are allowed since they depend on the allowed claim 11.

Claim 21 is allowed since there is no prior teaches a mobile device selectively operated in a first mode and a second mode, said mobile device comprising:

- a unitary display panel having a viewer side and a back side, said viewer side being divided into a first area and a second area, in response to an image signal, said first area and said second area being configured to display variable data on said viewer side;
- a first light source for illuminating said first area on said viewer side;  
a second light source for illuminating said second area from said back

side; and a processor for controlling said first light source and said second light source according to modes of said mobile device;

wherein

- said first light source and said second light source are driven to illuminate said first area and said second area simultaneously and to make said first area and said second area have substantially same visually brightness as each other when said electronic device is operated in said first mode, so that data for said first area and data for said second area are illuminated on said viewer side at the same time;
- said second light source is driven to generate light with lower brightness than said first light source to make said second area visually darker than said first area on the viewer side when said electronic device is operated in said second mode for conserving power of said mobile device.

Claims 22-23 are allowed since they depend on the allowed claim 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
